

Snail1, fibroblast activation and tumor invasion

Dr. Antonio Garcia de Herreros , Ph.D.
Cancer Research Program
IMIM (Institut Hospital del Mar d'Investigacions Mèdiques)
08003 Barcelona, Spain

I will make an overview of the process of EMT, with their current challenges and with a special reference to Snail1. I will focus on our recent findings on the action of this factor on EMT and will move to other functions of Snail1 in the activation of cancer-associated fibroblasts. Finally, I will present some preliminary results on the activity of deubiquitinases working on Snail1 that might be considered as putative targets for blocking Snail1 function.
